DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1,

line 22, "a rotatable element" limits the member in singular form and therefore causes inconsistent with "at least one ramp surface" in claim 1 and other dependent claims. For clarity, "a rotatable element", wherever it appears in the claims, should be rewritten as "at least one rotatable element".

Line 25, it cannot be understood what "a brake surface" is referring to and how it is structurally and functionally related to the closer.

Line 28, "to separate the first and second parts" renders the claim confusing since the parts are not clearly defined as joint parts.

Line 29, it cannot be understood what "an adjacent surface" is referring to and how it is structurally and functionally related to the closer.

In claim 10, line 2, it cannot be understood structurally what "first part engaging longitudinal surfaces" is referring to.

In claim 11, lines 1-2, "said first part has said brake surface and said carriage includes a brake member providing a further brake surface" is confusing. The "first part" as disclosed is a subcomponent of the "carriage". It is not clear how the "brake surface" of the carriage is being defined over the "brake surface" of its subcomponent.

In claim 14, line 3, "the first brake parts" is not understood.

In claim 19, lines 2-3 "said arm axis" is not understood.

Claim 20 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential elements, such omission amounting to a gap between the elements. See MPEP § 2172.01. The omitted elements are: structure enables the lever to perform "that torque applied to said lever is substantially constant". "configured" does not constitute a limitation in any patentable sense. A mere arcuate surface does not enable one skilled in the art to understand the invention structurally.

Allowable Subject Matter

3. Claims 1-20 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

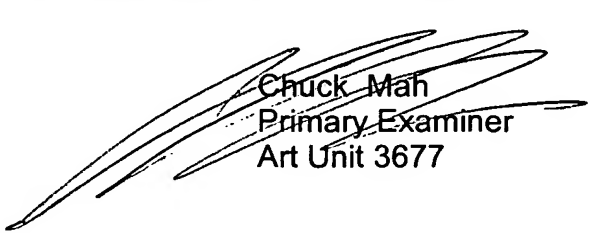

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
